

**Four KNOW-HOW :** programming and webdesign skills, working from and with grassroots neighbourhoods, innovating in participatory processes to outreach a large and diverse audience, and finally, define governance frameworks for citizen coproduction.

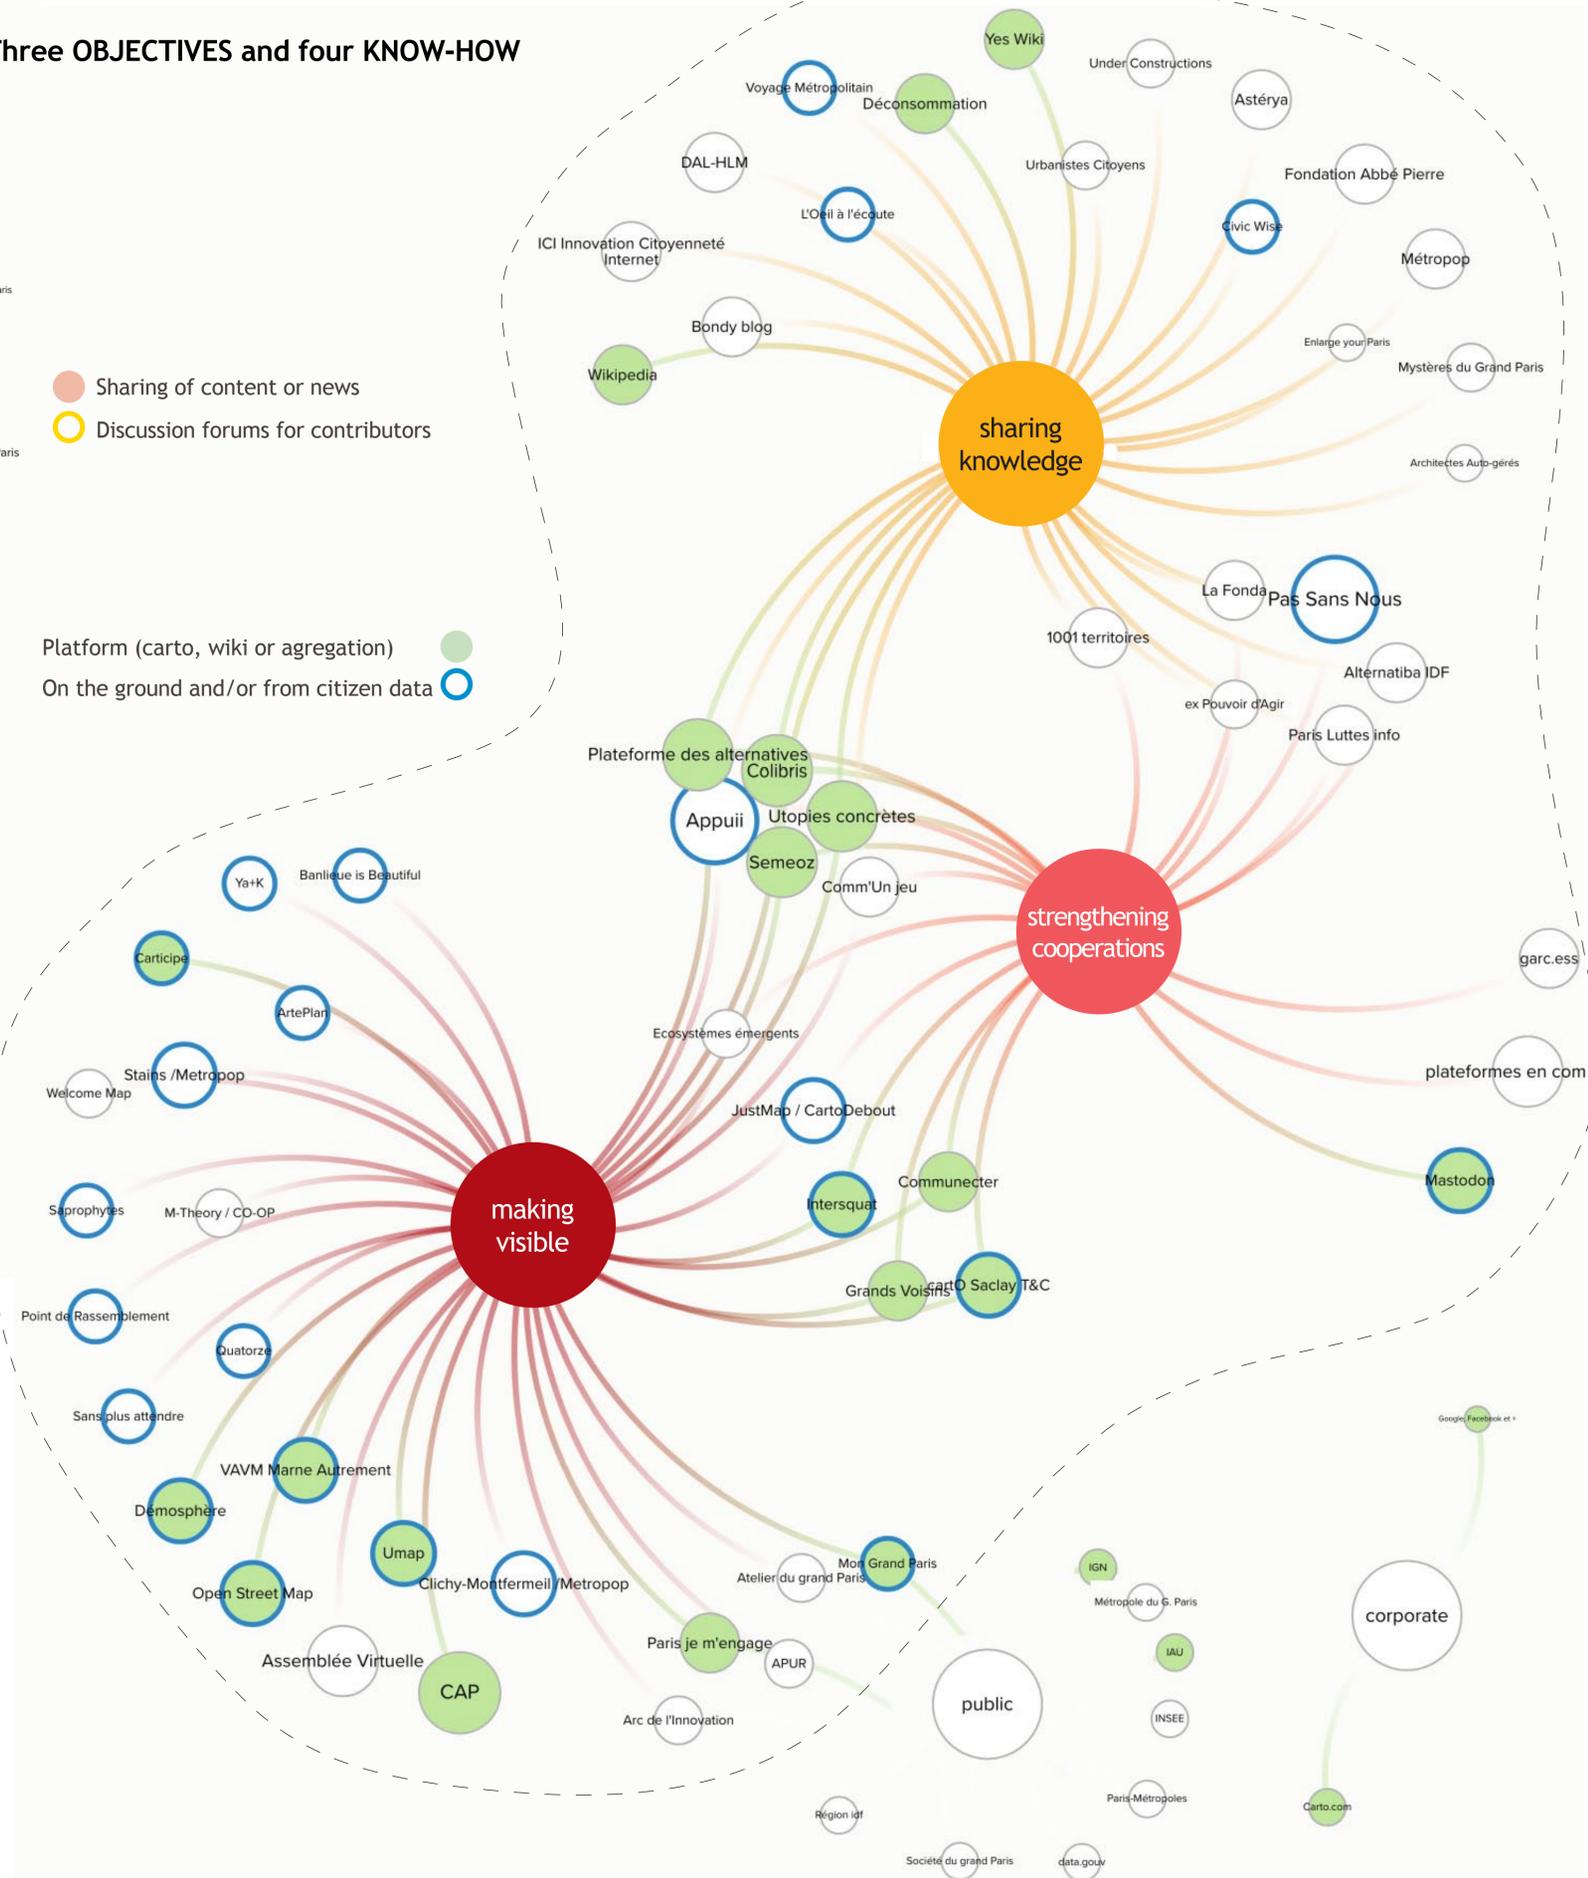

**Paris' metropolis**  
**Platforms for an alternative, just and cooperative planning**

**Three OBJECTIVES :** making visible, sharing knowledge and strenghtening cooperations / alliances.

**Three OBJECTIVES and four KNOW-HOW**

- Sharing of content or news
- Discussion forums for contributors

Platform (carto, wiki or agregation)  
 On the ground and/or from citizen data

**Towards a system of platforms for grassroots citizen participation ?**

Locally in the neighbourhoods but also at a metropolitan scale.

Focused on planning as a central issue, but also of course on other issues directly connected : environnement, culture, social economy, transports, housing...

What are the groups that could potentially contribute to this platforms ecosystem and that have indispensable skills and know-how ?

This inventory is both too wide (some groups won't participate) and too restricted (many groups are not yet mentioned because of ignorance).

This visualisation is an ongoing tool that needs to be redesigned through collective workshops. **qui doit être remis sur la table lors d'ateliers collectifs** to define progressively who could/would participate to this platforms ecosystem

and what would be its content and architecture.

**Appuii network** has already started reflexions and collective workshops around this issue.

À noter aussi le projet de **Plateforme Web des Alternatives** en cours de développement à l'échelle nationale.

Here below the interactive versions of this poster's maps :

**Map of the 3 objectives :** making visible, sharing knowledge and strenghtening cooperations / alliances.
